

Sine

- function
- continuous- to discrete time domain
 - phase

Sine

function

Sine in continuous time

- frequency = 1
- wavelength = 1 second

Sine in continuous time

- frequency = 1
- wavelength = 1 second

0

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$\frac{1}{8} \pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$\frac{1}{4} \pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$\frac{1}{2} \pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$$\frac{5}{8} \pi$$

Sine in continuous time

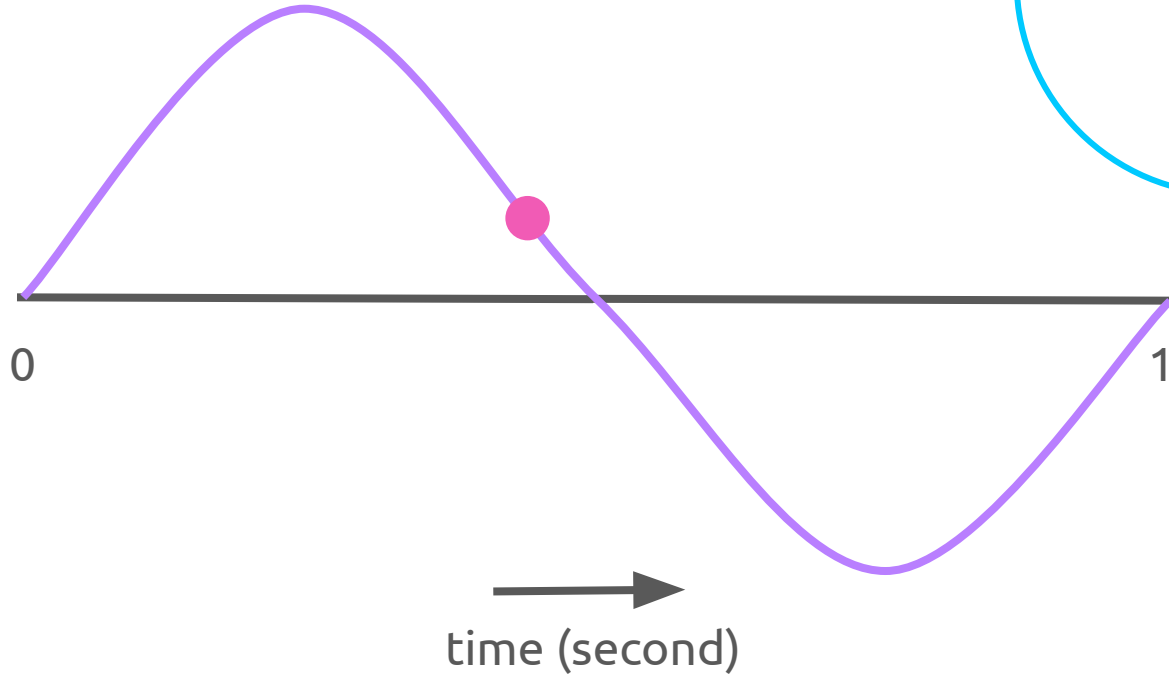

- frequency = 1
- wavelength = 1 second

$\frac{3}{4} \pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$\frac{7}{8} \pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

π

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$1\frac{1}{4}\pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$1\frac{1}{2}\pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$1\frac{3}{4}\pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$2\frac{1}{4} \pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$2\frac{1}{2}\pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$2\frac{3}{4} \pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$3\frac{1}{4}\pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

$3\frac{1}{2}\pi$

Sine in continuous time

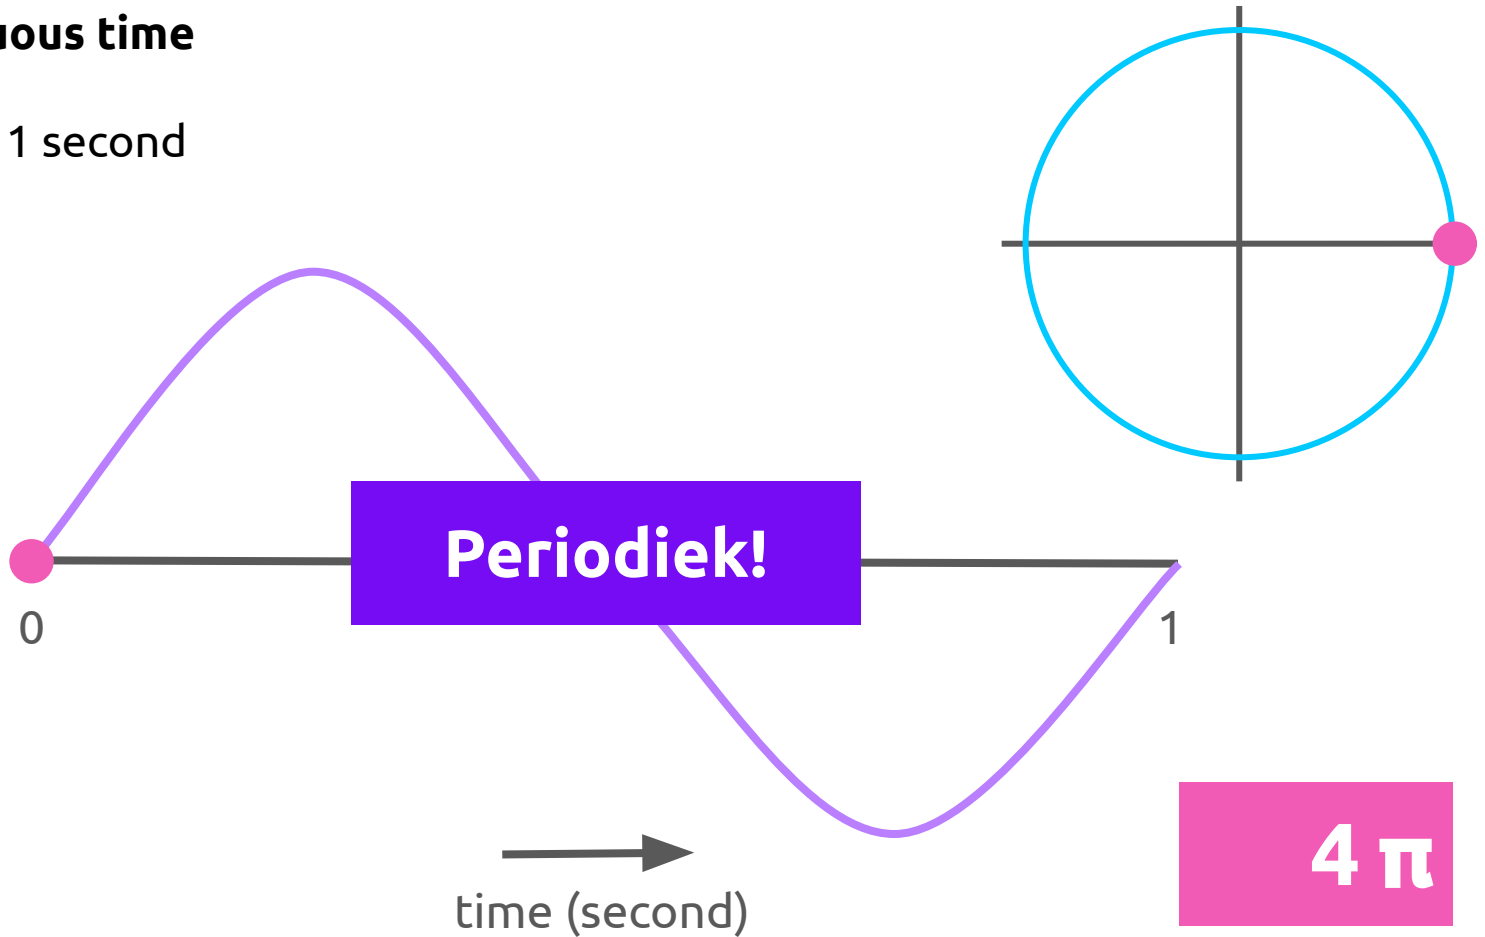

- frequency = 1
- wavelength = 1 second

$3\frac{3}{4}\pi$

Sine in continuous time

- frequency = 1
- wavelength = 1 second

Sine

continuous- to discrete time domain

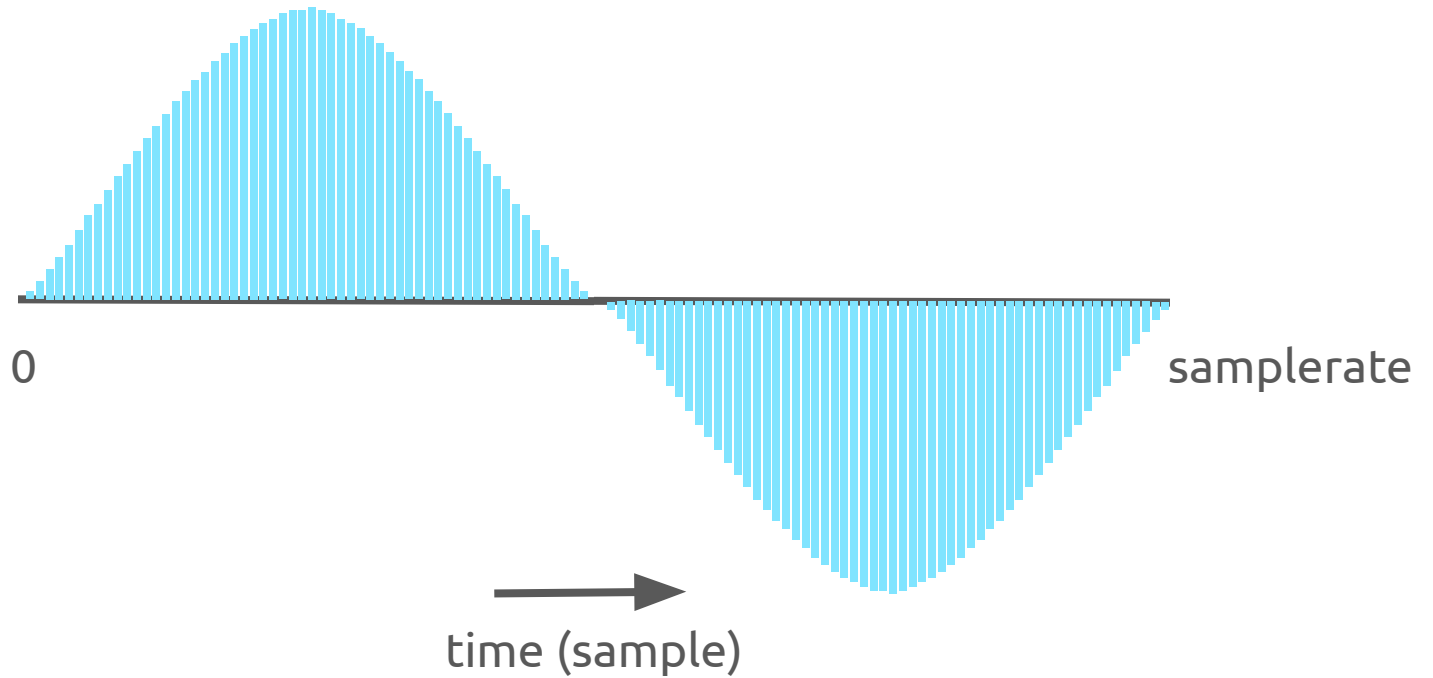

Sine in continuous time

- frequency = 1
- wavelength = 1 second

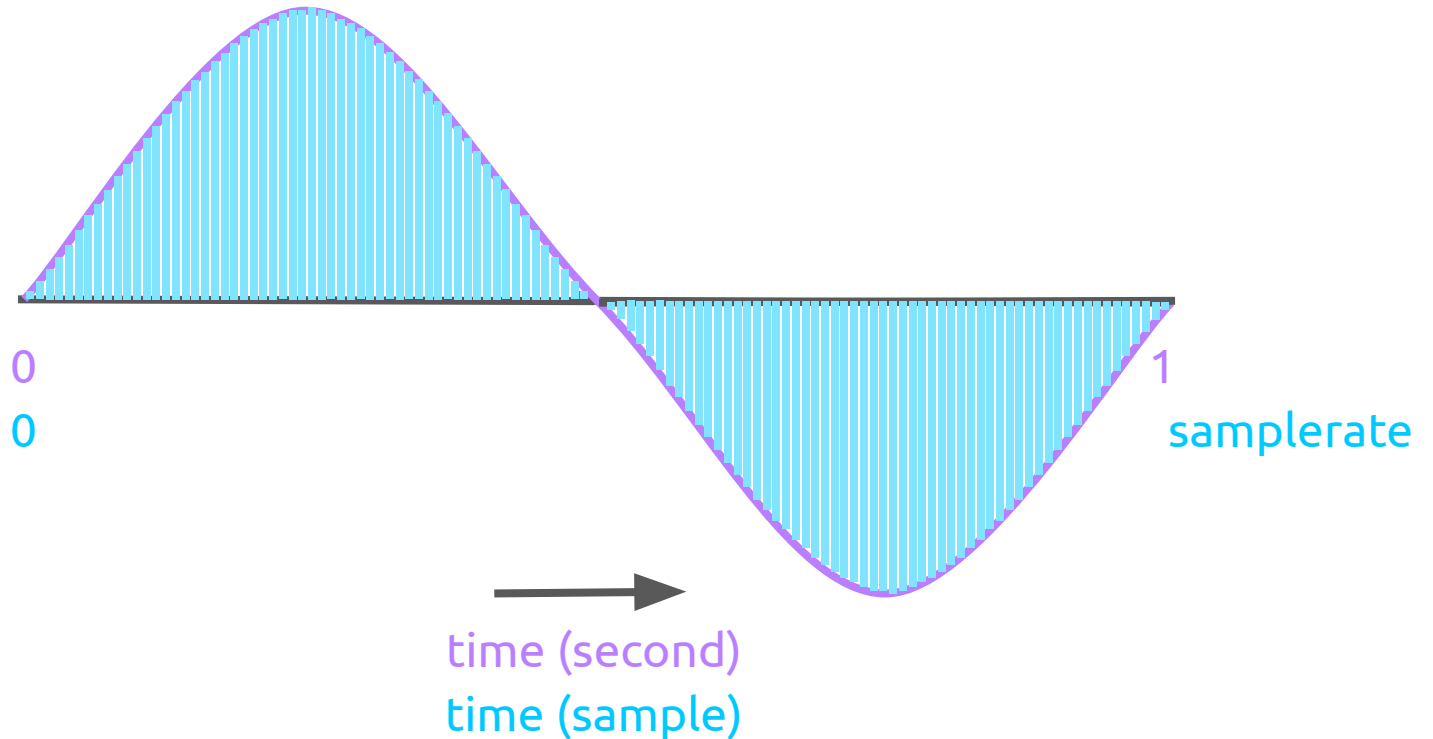

Sine in discrete time

- frequency = 1
- wavelength = 1 second \rightarrow samplerate

Sine in discrete time

- frequency = 1
- wavelength = 1 second \rightarrow samplerate

Continuous time → discrete time

interval $[0, 1]$ (second) → interval $[0, \text{samplerate}]$ (sample)

Continuous time → discrete time

interval $[0, 1]$ (second) → interval $[0, \text{samplerate}]$ (sample)

Continuous time → discrete time

interval $[0, 1]$ (second) → interval $[0, \text{samplerate}]$ (sample)

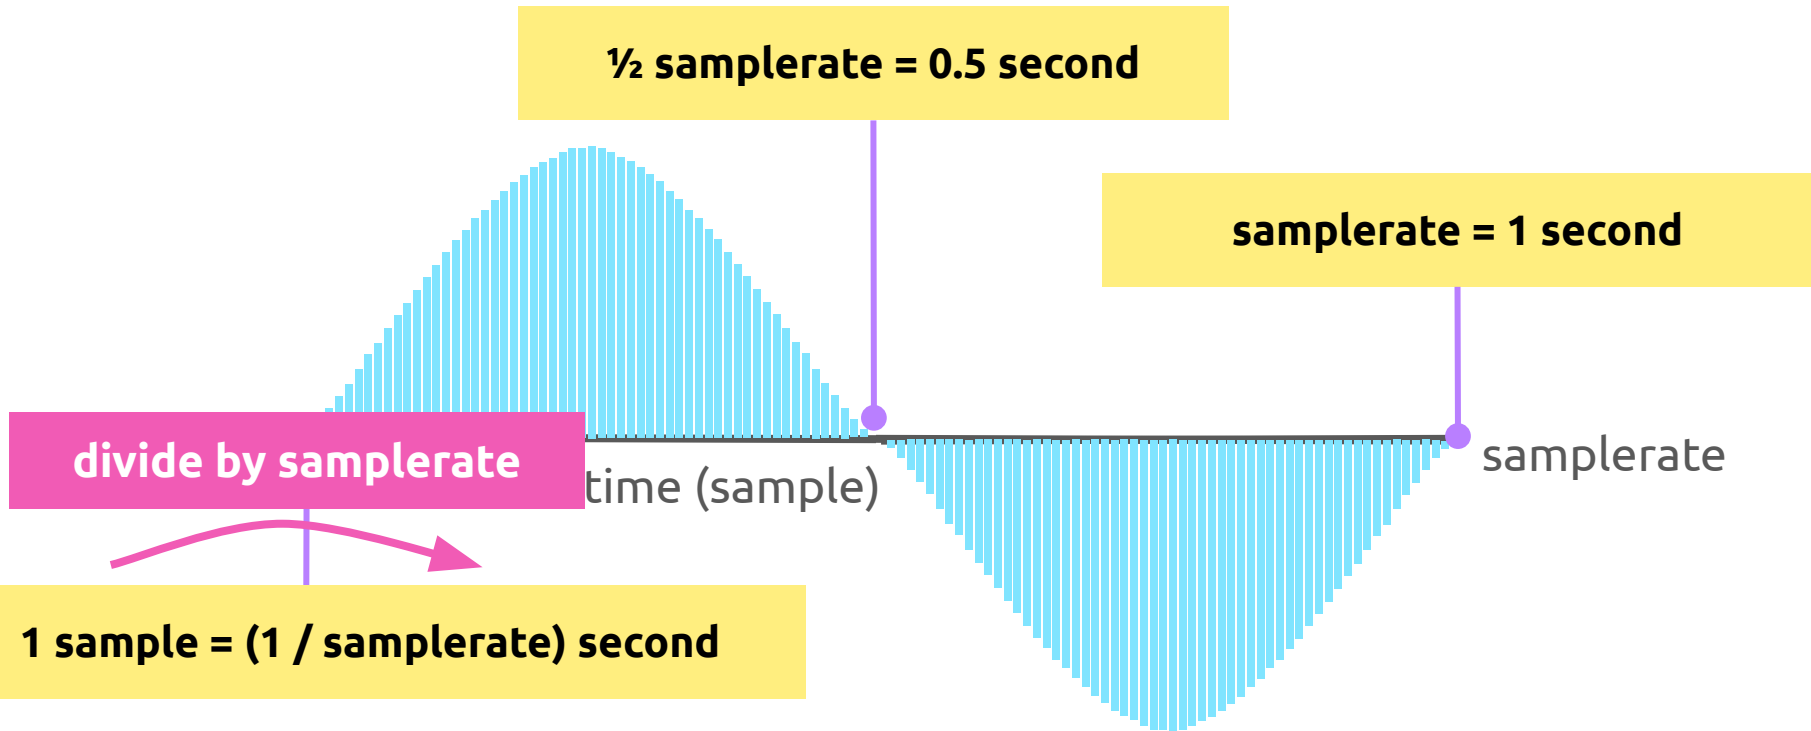

Continuous time → discrete time

interval $[0, 1]$ (second) → interval $[0, \text{samplerate}]$ (sample)

Continuous time → discrete time

interval $[0, 1]$ (second) → interval $[0, \text{samplerate}]$ (sample)

Sine

phase

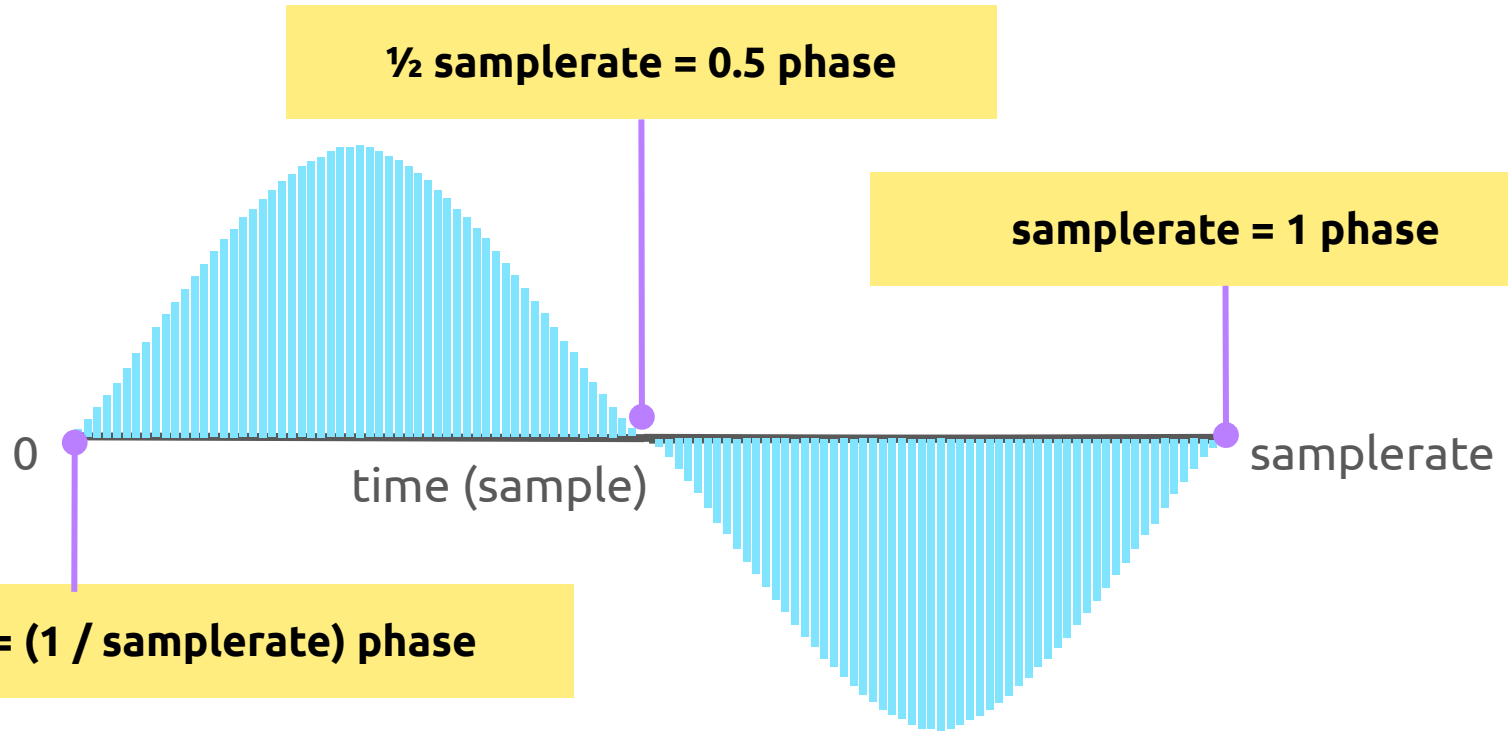

Sine in discrete time

$[0, \text{samplerate}]$ samples $\rightarrow [0, 1]$ phase

Sine in discrete time

$[0, \text{samplerate}]$ samples $\rightarrow [0, 1]$ phase

Sine in discrete time

$[0, \text{samplerate}]$ samples $\rightarrow [0, 1]$ phase

To sum up

- Continuous time

$$f(t) = \sin(t * 2\pi)$$

- Discrete time

$$f(\text{sample}) = \sin(t / \text{samplerate} * 2\pi)$$

- Discrete time, expressed as function of the phase

$$f(\text{phase}) = \sin(\text{phase} * 2\pi)$$
